TORAY - ROPUR RPI-3000 Antiscalant: Membrane compatibility

ROPUR RPI-Antiscalants chemicals have been developed in 1983 for applications on Reverse Osmosis (RO) membranes for Brackish- and Sea-water desalination treatment. Toray RO polyamide composite membranes have been successfully operated worldwide with the ROPUR RPI-3000 product without any compatibility issue reported. In addition to Toray membranes, the ROPUR RPI-3000 product has been successfully applied on most commercially available polyamide composite Reverse Osmosis Membranes including DOW membranes.

For a safe use and best performance, it is recommended to follow the information provided in the corresponding ROPUR RPI-Antiscalants technical- and safety-data sheets.

Best Regards.

Dr. Jean-Jacques Lagref
